| 4/21/16 | Non-Reportable | On April 21, 2016, at approximately 2:15 p.m., a forklift operator was pulling a skid out of a tractor trailer at the Building 98 loading dock when the metal bands on one of the pieces of granite broke. A piece of granite tipped off of the skid inside of the truck. Upon inspection, the skid was not very well constructed. The metal bands holding the granite to the pallet broke as the pallet was starting to lift a little higher to get off the back of the truck. There was no one in the truck or near the pallet when this happened. There were no injuries. The material appears to be in good shape. The riggers arrived and used slings to remove the pallet/material off of the truck and into the building. (Event Link) |
| 4/20/16 | SC-3 | At approximately 3:00 pm on Wednesday, April 20, 2016, Building 735 was evacuated due to smoke alarm activation. Smoke rising from an electronics rack in lab 1L38 activated the alarm. The smoldering ceased when the equipment shut itself down on fault. Fire Rescue responded and the scene was secured pending investigation. (Event Link) |
